

EMS FIND
ambulance on demand

First to Market Play From EMS Find Inc. (EMSF)
Is Set To Shake Up \$15-Billion Market With Next-Gen Breakthrough

EMS Find (EMSF) Has One Ground-Breaking Solution That Could Make YOU A Fortune...Even Save Your Life One Day!

- EMSF presents you with what could be an immediate high-yield winner in a brand new and fast emerging market
- EMS Find is the only entry-level investment you'll need this decade.
- **WILD CARD PLAY:** All bets are off if Uber decides it's easier to buy out EMS Find than to spend big on its own new app!

**Like Uber...
EMSF is a Potential
APP BLOCKBUSTER!**

Because of its pioneering app, EMS Find (EMSF) has its eyes on a giant slice of the \$15 billion private ambulance market!

With technology stocks storming the markets, it's more difficult than ever to buy low at entry-level prices.

That changes for you right now.

Because, today, you are one of the first to see this one coming!

This is why it could turn out to be the most successful stock market trade you'll make this, or any year... **its explosive potential could turn your pocket change into a bonanza of profits.**

That Makes This A Pivotal Moment In Time For Investors To Make Their Moves Into EMS Find Inc. (EMSF)

A nimble young company called EMS Find (EMSF) is

about to rock the medical transportation market with a pioneering new high-tech product.

This looks to be the first real blockbuster tech breakthrough in a sector that has changed little during the past 90 years.

And, while it's true that early-entry opportunities, like EMS Find can become huge moneymakers for ground-floor shareholders, **nothing I've seen in recent memory could be as far-reaching as this.**

That's why you'll need to rush into the market and to make your move on EMS Find (EMSF) today.

Because, in as little as three months from now, its stock could be selling six

to eight times higher than the price you can get in for today. The reason is simple.

The Potential For As Much As 515% In 2015 And Much More Over The Long Term...

EMS Find is preparing to release a groundbreaking new app for tablets, smart phones, and computers that could benefit the entire U.S. population.

It could even help save your life one day!

Ultimately, EMS Find's app could revolutionize a mature market that generates \$15 billion in revenue annually!

From an Investor's Point-of-View, EMSF Could Be One of The Best Growth Opportunities I've Seen in Years; I Urge You to Act On This Immediately

Here's the whole story:

Imagine you're a nurse or hospital social worker who needs to discharge a patient and get him home, comfortably and safely. What if that patient is still on an IV or heart monitor, or has other special medical requirements?

Often their needs exclude going home in the family car and you

can't just stick them in a cab and call it a day.

But now, using EMS find's new "On-Call" network, it's all taken care of in seconds. All the hospital staffer needs to do is select the transport requirements needed, and then enter the pickup point and destination.

What EMS find is about to do is release an app for iOS and Android that could do for medical transportation what Uber did for the taxi industry in what seemed like the blink of an eye.

A Game-Changing App Is Ready for Rollout

Leading the taxi revolution with a mobile-app-based transportation

An Investment In EMS Find (EMSF) Puts You On The Leading Edge Of Two Massive Investment Trends...

It's amazing to consider how many millions of investors are cursed to be looking in their rearview mirrors at lost opportunities – billions down the drain – all because they failed to recognize the future.

I promise you, there will be thousands of investors who could feel that way someday about EMS Find (EMSF) because they overlooked the trend that today, is transforming even the most hide-bound traditional industries, such as healthcare.

In short, software applications on smartphones and tablets are taking over.

Uber has transformed the taxi industry. The five-year-old company is now valued at more than \$41 billion. Uber's competitor, the LYFT app, is three-years old and now valued at \$2 billion.

OpenTable, the app that makes restaurant reservations, was just acquired by the Priceline Group for \$2.6 billion.

Airbnb, the app that is shaking up the hotel industry, is now valued at more than \$13 billion.

All of these companies have transformed their industries by simply matching available inventory directly with consumers. One by one, every industry is being touched by these on-demand software solutions.

Investing in The on-demand software TREND, combined with the exploding trillion dollar medical industry TREND can make you a fortune.

Taxis, hotels, and restaurants are great industries for on-demand software solutions, but none of those are growing as fast as the medical industry. Recent innovations allowing more people to be treated for diseases like cancer and heart disease combined with the aging Baby Boomer population means a longer life expectancy for a large population, which means many more ambulance rides.

Like Uber and other software applications, EMSF is a transformative company that could be changing forever how people get to and from lifesaving medical treatments.

Billions of dollars are flowing into pioneering apps, so chances are you won't have much more time to move into EMS Find (EMSF) while its shares are still at or around entry-level prices.

As has happened time and time again, embracing the future... making the trend your friend... could make you an outstanding fortune!

network now finds Uber valued at \$41 Billion.

The big difference between EMS find and Uber is that EMS find probably isn't for most of the people reading this report... healthy people.

But, EMS find could be a lifesaver for people who are sick, or have chronic illnesses that demand regular treatment.

What makes EMS find similar to Uber is that its app creates a transportation network.

But this high-tech network is for ambulance companies, medical transport fleets, hospitals, nursing homes – pretty much any organization that needs to shuttle patients back and forth.

Get Some Money On The Table Now Because This Could Be Big!

Here is another example of how this could work:

Say your mom needs to keep her blood clean with dialysis treatment three times a week. It is nothing less than a lifesaving treatment.

She has a sharp mind, but is a little physically frail. The person who has been taking her to dialysis for the past five years can no longer do it.

Making matters worse, your mom lives in Philadelphia and you live in Phoenix.

This used to be a major problem, but if you were using the EMS Find app you and your mom would have an easy solution. Your mom could simply order the appropriate

medical transport and get a lower rate than she would if she called the transport provider directly.

EMSF's App Is A Win, Win, Win!

EMS Find's app sends out an alert to all local medical transport companies.

"According to The on-demand Economy, over \$4.8 billion in capital has been invested in on-demand companies, with \$2.2 billion invested in the last 12 months alone. The transportation industry alone has amassed over \$2.1 billion in financing..."

**BUSINESS
INSIDER**

A nearby EMS Find-enabled vehicle is idling... not making a dime.

The driver sees the alert, accepts the job and his company automatically pays EMS Find a \$5 fee for arranging the connection. A sweet deal considering the transport company will get as much as a \$500 reimbursement for the ride.

This is a huge win-win: idle ambulances (and the companies that own them) get more work, and people who otherwise would've

been stuck at a facility or turned away outright can get their procedures done and get home safely.

EMS Find Is A Next-Gen App That Could Instantly Modernize A Last-Century Sector

So, how huge is this market... how massive is the space EMS Find (EMSF) could fill?

The stats are staggering!

Before the minute hand on your watch moves, about 82 people will call for an ambulance.

An hour from now 9,134 people will have called. By the end of today, 109,589 people will have been transported to a hospital, or from a hospital to some other healthcare facility.

Some of those 109,589 folks will need an ambulance just to get home from the hospital today!

And, this same massive movement of patients will happen again tomorrow.

It never stops... 767,123 trips a week... more than 3 million every month... 40 million people a year demanding medical transport.

Ride EMSF's Unlimited Upside To What Could Be Staggering Gains!

This means EMS Find's vast potential is nothing less than Uber-like!

Unlike Uber, EMS Find could be hauling in tens of millions in revenue dollars before most investors catch on...

And, you could imagine what will happen should the Wall Street herd take a run at EMS Find... soaring share prices for early-entry investors.

Just imagine how huge EMS Find's market is? In the U.S. alone, there are...

2015 Is A Big Year For EMSF... Grab Your Position Now

Other than EMS Find (EMSF), I can imagine no other company you'll see this year that could have an app that is powerful enough to knit this vast, disparate market into a single seamless network.

In short, medical transport is a cutthroat market.

There are more than 15,000 hungry providers trying to grab a winning share of 40 million transports per year... in a \$15 billion industry. The average cost is about \$400 per ride. A sure-thing business model that's based on insurance companies, Medicaid, and Medicare paying for the majority of trips.

You could assume that no company would think anything of paying EMS Find \$5 for every trip it arranged.

Why EMSF Find Could Be an Overnight Success

Can you imagine the pressure?

As a nurse, every decision you make is high impact... the slightest mistake could cost a life.

So, you can imagine how difficult it must be for nurses to give quality care when they could be distracted by non-critical tasks, such as arranging rides for patients awaiting discharge... particularly when research shows that as little as a three-second distraction can double the number of mistakes people make. Four and a half second's inattention triples the rate of errors.

That translates into huge trouble for the U.S. healthcare industry, where the chilling reality is that preventable medical errors are the No. 3 killer – third only to heart disease and cancer – claiming the lives of some 400,000 people each year. It's a \$1 trillion problem that claims more than 1,000 lives a day, according to the peer reviewed Journal of Patient Safety.

When nurses need to discharge a patient, who is still on an IV, heart monitor, or other special medical equipment, they need to arrange a non-emergency ambulance. Not only do they have to find an available ambulance with the right equipment, but they also need to make sure the ambulance accepts the patient's insurance.

Anyone who can remember back a few years ago when they had to call for a taxi recalls how frustrating it was to wait on hold only to be told there were no rides available and that they had to call another taxi company. It is always more convenient to press a button than to have to make several phone calls. Just like Uber, worth \$41 billion and LYFT worth \$2 billion, made it easy for consumers to order transportation, EMS Find is going to make it easy for millions of health care workers to order ambulance rides.

You can only imagine what that could do for EMSF's share price.

On its planned nationwide rollout, EMSF's entry-level stock price could spike faster than anything you've experienced in years! SO, MAKE YOUR MOVE NOW.

Tens Of Billions Of Dollars – Dialysis Is A Huge, Lifesaving Industry

Think about this – getting people to and from treatments will stimulate the dialysis products and services market to soar to an expected \$115.4 billion in the next five years.

This is a massive business. EMS Find (EMSF) could be at the heart of it.

Source: Transparency Market Research

EMS Find (EMSF) STRONGEST BUY!

INVESTMENT FACTORS:

• EMSF Benefits from 2 Explosive Trends:

1. The overwhelming acceptance of on-demand app technology like Uber and ZocDoc, and
2. Out of control growth of the medical industry

- Potential to Dominate \$15 Billion Private Ambulance Industry
- First to Market Advantage Means Buyout Potential from Suitors like Uber... Could Be a Huge Windfall for First-In Investors.

Conservative Profit Strategy:
Sell half at \$6.15 hold balance to \$12.66

Aggressive Profit Strategy:
Hold to \$12.66 or higher

Here's Why EMS Find's Entry-Level Shareholders Could See 515% Gains Almost Overnight

Even if EMS Find could only crack but 10% of this market, it would be a \$40 million a year company.

And, with virtually no real overhead – except what it paid accountants to count the cash – most of that \$40 million would translate to pure profit. Look, 30 years ago ambulance rides were generally provided free of charge, underwritten by taxpayers as a municipal service or provided by volunteers.

Today, like the rest of the health care system in the United States, most ambulance services operate as for-profit businesses... proud free-market enterprises.

And, ambulance services continue to gain importance as a vital part of the American healthcare system.

The Full Impact Of Baby Boomers Is About To Crush The U.S. Healthcare System

There they go again.

The roughly 77 million Americans who make up the Baby Boom generation are leading the country through yet another sweeping societal change.

About 3 million Baby Boomers will hit retirement age every year for about the next 20, and will affect how caregivers and policymakers shape the health care system for decades to come.

"This is the most powerful force operating in our health system right now, this generational change," says Jeff Goldsmith, president of Health Futures Inc., of Charlottesville, VA.

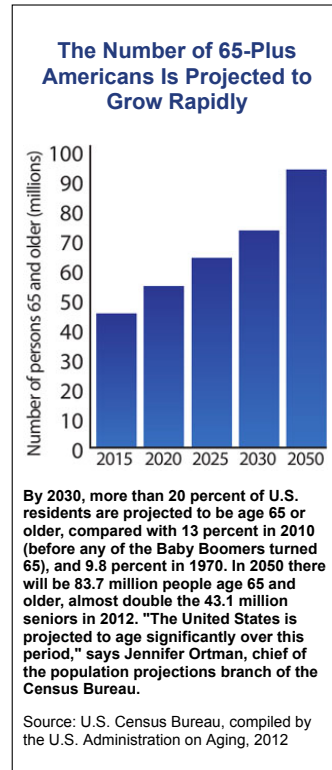

So far, the growth in the number of senior citizen boomers has been incremental, and its impact on health care has been overshadowed by federal reform and budget battles. "People aren't paying much attention," Goldsmith says.

That will change. As it has so often in the past, the Boomer generation, through its sheer size, is likely to dominate the conversation once again.

For hospitals, that conversation will take two tacks: how to address the many challenges of caring for a burgeoning cohort of elderly patients and how an aging health care workforce will impact the delivery system.

The U.S. Census Bureau categorizes Baby Boomers as individuals born between 1946 and 1964. The effects of having to care for such a large group will be felt in many areas, including a pressing need for more medical transportation.

At the same time, Boomers will leave the workforce in growing numbers, creating voids in clinical care and health care management.

9 Great Reasons Why EMS Find (EMSF) Could Propel You To A Fortune In Early-Stage Profits!

- 1 Nothing Like It** - EMSF is a first to market play. With virtually 2 Patient is delivered safely and receives treatment. no competition, they could control the Medical Transportation Industry for years to come.
- 2 Breakthrough Technology** - EMS Find's advanced medical transportation network technology brings the first real innovation to the private ambulance market in decades.
- 3 Smarting Up The Smartphone** - EMS Find gives live saving powers to smartphones and tablets.
- 4 Ground Floor** - In a mature market, such as private ambulances, the opportunity to invest at the start of a disruptive innovation is a rare event.
- 5 Early Adopters** - The forecast is for EMS Find's early subscribers to cause a hyper-fast world-of-mouth buzz inside the tightly knit ambulance sector across the country
- 6 Investor Stampede** - This means EMS Find could soon be nearing a critical mass that investors must take note of now - just as with overnight successes like Uber.

7 Worldwide Domination - Today, there is nothing like EMS Find, which integrates virtually all medical facilities and patients into a uniform transportation network.

8 Wild Card: Blockbuster Merger Bait - Facebook bought WhatsApp for \$19 billion. That sparked a huge, record-setting run in tech mergers that were 122% higher compared to 2013. I think the sky is the limit for an EMS Find buyout, particularly if Uber or a huge private equity firm is involved.

9 A realistic Scenario Suggests That EMSF Could Deliver You 515% Soon! - A rapidly expanding market could propel EMSF's ground-floor priced shares from around \$1 to more than \$6.15!

You should move quickly because shares at ground-floor prices of around \$1 could be worth a fortune should one of the big players decide to get greedy, shut down its competitors, and buy out EMS Find. In that case, EMSF shares could quickly soar above to \$8.65... \$5,000 could quickly become more than \$43,000!

EMS Find has a FIRST-OF-ITS-KIND APP When You Look At The Potential In A \$15 Billion Market You Can See How EMS Find (EMSF) Could Obtain Astronomical Growth And Become The Target of Hungry Tech Giants Such As Uber or Google!

- Remember, many people had never heard of WhatsApp before Facebook bought it for \$19 billion dollars.
- A deal with Facebook also netted Oculus VR investors a 20-fold gain when Facebook bought in May 2014.
- The same goes for Mojang, makers of Minecraft, which Microsoft acquired in July, 2014 for \$2.5 billion.
- Earlier this year Google paid more than \$3 billion for Nest Labs... then \$500 million each for Skybox and Dropcam.
- Google paid \$1.6 billion for YouTube
- The makers of the Ridescout and myTaxi apps copped about \$100 million in a buy by Moovel.
- Amazon bought Twitch for just under \$1 billion.
- Yahoo! bought Tumblr for \$1.1 billion.
- Facebook paid \$1 billion to acquire Instagram.

The bullets could go on and on because... the values of mergers, acquisitions, and initial public offerings have reached post dot-com highs, and tech executives say they aren't slowing down anytime soon.

According to MarketWatch, "the aggregate value of all disclosed-value deals set a post-dot-com-bubble high in the third quarter of \$73.7 billion – up 41% from a quarter ago... 923 deals were inked, the highest overall volume for any quarter since 2000. The number of those over \$1 billion tied an all-time record of 19 for a single quarter."

Invest in a First-to-Market Opportunity with EMS Find

What if I told you there was already a company that is valued at \$1.6 billion, with 6 million users and 150 million in funding and was doing almost the same exact thing as EMS Find except for 1 crucial difference?

ZocDoc is such a company. Both companies match consumers with a medical provider that takes their insurance and is available. The crucial difference is that ZocDoc matches consumers with doctors while EMS Find matches patients with ambulances.

ZocDoc shows that the medical industry will embrace smart technology upgrades!

The investor list in ZocDoc reads like a Who's Who of Silicon Valley: Yuri Milner, who made early investments in Facebook, Zynga, and Groupm; Paypal co-founder and billionaire Peter Thiel; billionaire and founder of Amazon.com Jeff Bezos; Marc Benioff, CEO of Salesforce.com, and many others. They all recognized the trend and opportunity!

The healthcare industry is exploding and ZocDoc proves the sector is ready for change. Now the same ground floor opportunity that ZocDoc provided to its investors is presented to you in the form of EMS Find.

This is why you must make your move on EMS Find at your first available opportunity.

Huge Investment Firms Are Counting On Massive Baby Boomer Ambulance Paydays, Too!

"Expect to see legacy providers in hospitality, transportation, and other Fortune 500s attempt to "partner with" or "acquire" more innovative on-demand companies. Ken Chenault, Chairman and CEO of American Express, conceded in their annual report, "Our industry is being redefined by many forces, including the continued revolution in online and mobile technologies, which is transforming commerce and society."

Back in 2011, American Medical Response (AMR), the self-proclaimed largest private ambulance company in the United States announced it had been purchased by the large private equity firm of Clayton, Dubilier, and Rice.

The price? A cool \$3.2 billion, or roughly \$64 a share.

A month later, Rural/Metro announced that the global private equity firm Warburg Pincus was buying the ambulance and fire protection services provider for about \$438.2 million... or \$17.25 per share in cash, a 37% premium over stock price.

How much do you think Warburg Pincus would pay to keep EMS Find's medical network transportation app out of Clayton, Dubilier, and Rice's hands... or vice versa?

Maybe \$100 million... \$150 million... who really knows right now.

Still, EMS Find (EMSF) could have a highly valuable piece of intellectual property on its hands. It could be the focus of a bidding war.

You would think that entry-level shareholders would be the big winners in such a war.

No time like the present to make your move into EMSF!

³<http://www.bloomberg.com/news/2014-03-26/oculus-deal-said-to-deliver-20-fold-return-to-spark-and-matrix.html>

EMS Find Is One Important Part Of The New Wave In Medical Technology

Today, health data can be transmitted to caregivers via mobile devices or in-home monitors.

Internet video allows for consultations with clinicians in more convenient locations than the medical office or hospital.

Technology allows patients to learn more about their personal health and the quality of their providers, and it will enable them to receive more and more care in the venue they most prefer: their homes.

A nimble young company, EMS Find (EMSF), has an app for smartphones, tablets, and computers that can arrange a wide variety of medical transportation for patients with needs ranging from the most basic life support to those who are critically ill.

This is vital technology because the Baby Boomers harbor a shocking secret!

The SHOCKING Trend That Could Make You Wealthy!

"I feel like so many existing experiences can be reinvented with the right simple gestures on mobile, and the needs and wants of Generation T (Generation Touch) are going to become the foundation of many massive companies of the future."

Josh Elman, partner
greylockpartners.

All this new technology, such as EMS Find's transportation network app, will be applied to a generation with a reputation for indulging itself more than its parents did.

That's likely why Baby Boomers will be the sickest generation ever!

Research published last March in JAMA (Journal Of The American Medical Association) Internal Medicine compared the health of Boomers to their parents.

4 JAMA found that despite a longer life expectancy, Boomers had higher rates of hypertension, cholesterol, diabetes, and obesity.ⁱⁱ

The findings "support an increased likelihood for continued rising health care costs and a need for increased numbers of health professionals as Baby Boomers age," the authors wrote.

A need for lots more medical Transportation too.

EMSF Is A Tremendous Opportunity For You To Profit From An Important New Medical Transportation Technology

Because, one of the biggest stress points is sure to be the care of the chronically ill, already a struggle for the Medicare program, particularly regarding patients with multiple chronic conditions.

Trips to dialysis, cancer treatments, and physical therapy could skyrocket!

"The reality is most elderly people do not have one disease on their death certificates," said Daniel Perry, president of the Alliance for Aging Research.

Multiple conditions usually require care from more than one specialist in addition to a primary care physician, and the system currently is set up in a way that doesn't encourage coordination and collaboration.

In other words, EMS Find (EMSF) and its medical transportation network app could be one of the most perfectly positioned companies on the planet today.

And, you can make your move into EMS Find (EMSF) shares now... while they could still be around \$1... at entry-level prices!

How To Profit On The Big BOOM!

Over the next five years, the growing number of people aged 65 and up will sustain industry growth, since the elderly face more medical issues than younger groups.

In fact, the world may never again see a generation of people who will have such a profound effect on the healthcare system as Baby Boomers.

Like everything else associated with them... every step of their lives... aging Baby Boomers have the continued potential to make smart investors very, very rich!

As they confront medical issues that come with aging, Baby Boomers have one last chance to influence society via the adoption of innovative health care tools and technology.

But, there are 77 million Boomers.

Without increased efficiencies, the health care system may collapse.

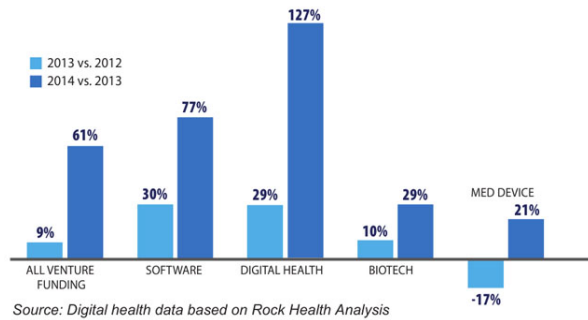

And, the health care industry is quickly moving to meet those demands.

Venture funding for digital health care companies (like EMS Find) in 2014 surpassed \$4.1 B, nearly equivalent to all 3 prior years 2011-2013 combined. This represents more than 125% YoY growth in funding compared to 2013.

Source: Rock Health Funding Database

Venture funding is hot with overall funding exceeding \$48 billion in a single year for the first time since the dot-com era! Digital health funding has, for the first time, far surpassed all other funding! Don't miss the trend; now is a great time to move into EMS Find (EMSF)!

The Key With EMS Find (EMSF) IS TO GET IN EARLY, On The Ground-Floor!

If you can still grab EMSF shares anywhere around \$1, then I recommend you do so immediately! Or, you can wait and count your blessings if you can get in under \$3! *In the coming months I expect that EMSF could announce that its breakthrough medical transportation network app has gone countrywide... at that moment, EMS Find shares could be worth a fortune!*

Opportunities Like This One Are Rare.

Few Companies On Wall Street Could Have Such A Profound Impact On Their Industry... They're NOT Potential Game Changers Like EMS Find Could Be!

- EMS Find IS STILL ANUNDISCOVERED STOCK.
- WALL STREET HASNT FOUND OUT.
- THAT SHOULD SUIT YOU JUST FINE.

But there's no guarantee that this will last. Once it's discovered by others the price could swiftly soar!

So, what should your next step be with EMS Find?

Call your broker and show him this report. When he says you must move now, buy as much of EMS Find (EMSF) as you feel comfortable with.

But at least get a toehold. You could miss your opportunity if you're a bystander.

Finally, if you're like me, you place a great deal of emphasis on "being early" for an emerging trend.

That's how the big gains are regularly seized in the stock market.

But, please do your due diligence on EMS Find. Think

about the facts of this industry. Closely examine its prospects for exponential growth or a buyout!

"In 2015 Uber, the world's largest taxi company owns no vehicles, Facebook the worlds most popular media owner creates no content, Alibaba, the most valuable retailer has no inventory and Airbnb the worlds largest accommodation provider owns no real estate."

TC TechCrunch

EMS Find could ride a huge nationwide trend that's only going to get bigger because the advantages for both the medical industry and patients are overwhelming.

So please, call your broker today or go online and purchase your EMSF shares.

I believe you'll look back on this opportunity and be very grateful that you acted promptly in order to get in on the ground-floor.

EMS Find (EMSF) STRONGEST BUY!

INVESTMENT FACTORS:
